

FabSoft's Solutions and the Healthcare Industry

Reform - FabSoft's Core Product **Automate form enhancement and distribution**

FabSoft's Reform streamlines business workflow by automating document management, enhancement, and distribution. Reform will capture the print stream from any operating system, application, or device; enhance it; and intelligently distribute it to printers, fax, email and archive systems. Users can generate customized forms, invoices, transactional documents, etc. - giving them a professional look and feel without having to buy expensive pre-printed forms. *All of FabSoft's Solutions require Reform Enterprise

The Healthcare Industry Challenges

The healthcare industry handles tremendous amounts of patient paperwork in their daily operations and managing these forms can be a very difficult and time consuming task. Additional concerns include compliance with HIPAA regulations, ensuring security of confidential patient information, making sure documents are being viewed by authorized personnel and having quick and easy access to needed forms. Not having a streamlined process to handle these issues leads to communication problems, high costs, inefficient workflow and slow turnaround. FabSoft offers a variety of solutions that provide automatic delivery of documents to recipients via fax and email, intelligent archiving to digital archive systems, postal sorting, workflow routing and even management and distribution of digital photographs. No matter what the document management need may be, FabSoft has a solution that can efficiently streamline workflow and improve productivity for any healthcare organization.

Tag Doc **Distribute and track forms and charts filled out by patients or physicians**

FabSoft's Tag Doc automates the archival of documents by combining barcode tagging with the scanning utility of any MFP or scanner. Patient Release forms and other documentation may need to be distributed to a patient or physician in order to collect handwritten notes or signatures. Since these documents will be returned with the necessary handwriting at a later time or date, it is difficult to ensure that they are being filed with the correct patient files. With Tag Doc, these documents are tagged with a barcode that is associated with the information on the form - patient name, physician name, insurance company, etc. When the form is scanned after it has been signed, Tag Doc will recognize the barcode and intelligently archive the document with the rest of the patient's paperwork. If the document needs to be referenced in the future, searches can be performed using any of the patient information that was on the form.

Snap Doc **Simplify the organization and distribution of patient images**

Digital photographs are used frequently in healthcare because they provide a visual look at patient symptoms and also assist in keeping track of a patient's progress. This is very difficult to manage since numerous patients can be photographed throughout the day, making it difficult to distinguish between them. FabSoft's Snap Doc simplifies this process by automating the organization and distribution of images taken with a Ricoh 500SE digital camera. With Snap Doc, forms can be printed containing a barcode and information regarding the patient - name, symptom descriptions, physician name, etc. The user will scan the barcode and take the needed pictures of the patient. When the pictures are uploaded, they are automatically associated with the patient's information and delivered via fax or email to the patient's insurance company and archived to the digital archive system. If the images need to be referenced in the future, searches can be performed using any of the patient information that was on the form.

FabSoft's Solutions can be applied to various processes of a Healthcare Facility:

- Admissions
- Discharge
- Patient Accounting
- Medical Records
- Nursing Stations
- Human Resources
- And more...

FabSoft's Solutions and the Healthcare Industry

Form Medic*

Access, fill in and distribute healthcare forms right from the convenience of the MFP screen

Form Medic is an innovative solution that replaces paper forms with electronic ones and allows healthcare personnel to access, fill in and process them from the most convenient location – the MFP screen. With Form Medic, users can select the form they need from an entire library of forms listed right on the MFP screen, providing on-demand access to the important healthcare forms they need. By using Form Medic's lookup function, specific patient information can be used to automatically fill in some

of the form fields so the form is printed with accurate and legible information. Additionally, when forms are completed and scanned, Form Medic can intelligently distribute them to any needed devices such as printers, fax, email and archive systems, enabling automatic communication of important information to different departments, physician's offices, insurance companies and the hospital's EMR.

Postal Sorting

Ensure patient forms and invoices are being mailed efficiently

Using incorrect address information when sending out patient invoices, insurance forms and other important paperwork can waste resources and cause delays that can severely affect operations in a healthcare environment. FabSoft's postal sorting eliminates this worry by utilizing address quality services to provide immediate verification and automatic correction of all addresses. FabSoft's postal sorting maintains the most up-to-date USPS certified postal data available, allowing healthcare facilities to confidently proceed with their vital deliveries. Additionally, mail is automatically CASS certified which qualifies it for USPS discounts of up to 9.5 cents per mail piece.

Document Authority Control (DAC)

Route documents throughout the facility for approval

There are many cases in which a document must be distributed to specific individuals throughout a healthcare facility in order to be reviewed and/or approved. Patient paperwork may need to be reviewed by a nurse, the patient's physician, a specialist or the surgeon. As the patient's files are reviewed by these individuals, they may notice some changes that need to be made or make comments and then sign for authorization. FabSoft's Document Authority Control (DAC) can be used in order to automatically perform this approval process. With DAC, users can set rules to determine where documents should be routed. Routing can be configured to occur across specific departments, to individuals with similar roles, within small work groups, etc. When a document is received, it can be viewed right from a web page where recipients can reject the document, add their own comments or even make changes. When finished reviewing and approving, the document will continue to be sent to the next level for further action.

**Form Medic is only compatible with select devices.*

About FabSoft

Established in 1992, FabSoft is a leading developer of document automation solutions that enable companies of all sizes to expand their maximum level of productivity. FabSoft specializes in streamlining workflow through intelligent document distribution and enhancement, with products that are fully compatible with all operating systems, applications and devices. With over 16,000 installations, FabSoft's solutions have been successfully implemented into the operations of businesses all over the world. FabSoft's line of solutions include: automatic document capture and routing of print jobs and scanned documents to printers, fax, e-mail & archive systems; electronic form enhancement; multi-part form distribution; barcode; image link; check printing; security print and more. FabSoft's solutions are simple to install and easy to use and can be implemented in accounting, finance and management systems of all kinds.

We strongly believe that our success in today's market is due to the fact that we listen to the requests and needs of our customers and make every effort to meet those demands. Our clients are our most valued assets and we will continue to listen to their changing needs and take action. Our technical staff is dedicated to updating, enhancing and creating products that save time and money. With software products from FabSoft, you can be sure that the learning curve will be small and the profits large.
