

User Printing

FabSoft's User Printing with the Reform Print Driver provides a complete solution for on-demand document management and distribution. With the Reform Printer Driver, when a user goes to print from their application, they can immediately specify the destination of their documents to various devices. For example, a user creates a file in Microsoft Word. Upon printing, they are presented with a window that allows them to configure various device settings and options. These adjustable settings can include printer options such as color, media type, duplex, stapling, etc; fax numbers and memos can be entered to deliver the document to fax; and indexes, directory locations, descriptions and form types can be specified in order to archive documents to digital archive systems. Once the user enters all of the desired destination information for the document, it is then used to route the document accordingly.

FabSoft's User Printing provides users with the convenience of indicating document delivery details right from their application, resulting in time and cost savings, elimination of errors due to physical filing and an increased access and sharing of important information. Additionally, the window that is presented can be modified to include any options and fields desired. This ensures that documents are being delivered to the correct locations since you can control which folders, devices, print options, etc. can be accessed.

Benefits of User Printing with the Reform Print Driver

- When a user prints a document from their application, routing information can be immediately specified by the user.
- Users can conveniently select printer options, indexes, directory locations, fax numbers, etc.
- A single print job can be automatically distributed to an unlimited number of output devices - send copies to printers, fax, email and archive systems.
- Automating document management and distribution eliminates filing errors and frees up more time for employees.
- Save money on postage by delivering documents electronically via fax or email, and replace expensive pre-printed forms with plain paper.
- Increased access to current important document information improves business workflow quality and facilitates informed decision making.
- Documents archived by Reform can be easily copied and stored off-site so that information cannot get lost, stolen, or damaged

User Printing with the Reform® Print Driver

About FabSoft's Reform®

The Reform Print Driver is part of FabSoft's core product, Reform. Reform streamlines business workflow by automating document management, enhancement, and distribution. Along with capturing the print stream from the user's application, Reform can also capture documents from the Host System or a device. Documents are then automatically distributed to printers, fax, email and archive systems according to the information in the print stream or what was entered using the Reform Print Driver. Additionally, documents can be routed to FabSoft's other solutions, such as Document Authority Control for approval processes and Tag Doc for management of outgoing and incoming paperwork. FabSoft offers various solutions that are flexible enough to improve the processes of any organization, despite what their needs may be.

About FabSoft

Established in 1992, FabSoft is a leading developer of document automation solutions that enable companies of all sizes to expand their maximum level of productivity. FabSoft specializes in streamlining workflow through intelligent document distribution and enhancement, with products that are fully compatible with all operating systems, applications and devices. FabSoft's solutions do not change the organization's existing workflow, but enhance it – so they are very easy to utilize and for users to grow accustomed to.

FabSoft's line of solutions include: automatic document capture and routing of print jobs and scanned documents to printers, fax, e-mail & archive systems; electronic form enhancement; multi-part form distribution; barcode; image link; check printing; security print; distribution from the multi-function device or application; document approval processing; and more. FabSoft's solutions are simple to install and easy to use and can integrate with accounting, finance and management systems of all kinds. To date, FabSoft has successfully implemented more than 16,000 installations around the world.

User Printing requires FabSoft's Reform® Enterprise. Other requirements may also apply depending on desired workflow.
