SMARTGRADE & QUICKGRADE

Streamline Examination Workflows & Boost Teacher Productivity

The common issue with testing is the amount of time teachers must dedicate towards test grading, which naturally results in less teaching time. Our automated grading software places time back in the hands of educators with its intuitive user interface and automated grading features. Once a teacher has tried SmartGrade & QuickGrade for the first time, it will likely become their go-to grading tool on account of its power and ease-of-use.

Depending on the task at hand, you may want to create a quick, custom bubble sheet exam in which case QuickGrade is the solution you are looking for. On the other hand, a potential SmartGrade user might prefer uploading classroom information once, and allowing our software to auto-populate new bubble sheets with their students information. Both solutions offer comprehensive test reporting, which will provide teachers with important insight into the academic areas their students could improve upon. SmartGrade and QuickGrade are more than just time-savers, these solutions can enhance the overall learning experience of an entire student body.

Features

- **Fast, Easy Grading** - Print out an answer sheet, along with your students' bubble sheets in a matter of seconds. Once these sheets have been completed, place them on your scan tray, select scan, and let our grading software take over.
- **Thorough Exam Reporting** - After grading has been completed, QuickGrade and SmartGrade will print out an exam report with a variety of statistics.
- **Roster Information Saved** - Save whole classroom rosters with our SmartGrade solution.
- **Auto-Populated Exams** - SmartGrade takes previously saved roster information and populates this data onto newly printed bubble sheets.
- **Go Beyond Our Default Bubble Sheet** - QuickGrade allows you to edit the number of students, the number of questions (up to 100), and the number of answer choices (2 to 5).
- **Cloud-Based Solution** - This software can be installed, and maintained from a remote location.
- **Leverage An Entire Network** - Use any HP, Lexmark, or Ricoh device to access our grading software.

Benefits

Need to create a quick exam? Take the QuickGrade route. QuickGrade is designed for an instructor who occasionally conducts examinations and would like to quickly create a custom bubble sheet exam to distribute to a class. With its intuitive editing interface, QuickGrade allows you to alter the number of questions, answer choices, and test-takers from your nearest multi-function printer (MFP).

For those thinking long-term, SmartGrade is for you. SmartGrade would best serve a teacher who administers tests frequently. Take an entire classroom roster, input this information, and save it locally to your MFP. Going forward, SmartGrade will automatically populate each of your classes stored roster information on each exam. SmartGrade then generates a CSV export file with the results of the exam and sends it to the instructor's email address.

Zero-in on what's not working in the classroom. After each exam, a detailed test report is printed, which includes analytics such as individual averages, class performance on certain questions, and much more. Now instructors can analyze these statistics and hone in on what specific concepts were not fully grasped by the class through our comprehensive exam reporting.

More teaching, less grading. With the time saved through SmartGrade and QuickGrade's ease-of-use and high-speed grading features, educators have more time to provide one-on-one instruction to those students who are struggling to learn new class material. Some students require additional help in order to fully understand lessons, and our grading software contributes towards making these extra learning sessions a reality.
